**Art Unit: 1711** 

#### **DETAILED ACTION**

## Response to Amendment

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

The rejection of claims 1-19 under 35 U.S.C. 103(a) as being unpatentable over Kay et al taken with Bultman et al is hereby expressly withdrawn.

# Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 8, 11 and 17-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recitations in claim 8 of the terms "acetal" and "vinyl", and in claim 11 of "allylic" and "amino" render those claims as vague and confusing. These terms refer to functionalities, and do not serve to reasonably convey to one having an ordinary skill in the art exactly what may be embraced, thereby.

In claims 17-19, the composite is defined by its properties and not by its composition or other factors determinative thereof. As such, the proper metes and bounds of the claims cannot be clearly ascertained, and the claims are, thus, vague.

**Art Unit: 1711** 

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9, 13, 14 and 16 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Schloman, Jr., newly cited.

The reference to Schloman teaches the production of composites that may comprise at column 3 (lines 11-44) particulate bagasse material from the guayule plant, *Parthenium argentatum*, in admixture with guayule resin, broadly a vinyl-type resin, as recited in claims 1-3, 7, 8 and 13. Note column 1 (lines 18-45) for the processing of the guayule plant to produce the bagasse, as recited in claims 4 and 5. Further, note the paragraph bridging column 5 to column 6, and column 4 (line 37) to column 5 (line 29) for the processing of the plant, *per se*, as recited in claim 6. The proportions of constituents, as recited in instant claim 9, are shown at column 8 (lines 7-11) of the reference. Note column 7 (lines 45-61) for the use of spray layering techniques for the application of the resin, as in claim 14. At column 6 (lines 48-61), the reference teaches the plant materials contemplated for use herein, and recited in claim 16, are disclosed. Finally, note Examples 1-4 at column 8.

**Art Unit: 1711** 

## Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schloman, Jr. as applied to claims 1-9, 13, 14 and 16, above, and further in view of Chow, newly cited.

The reference to Chow teaches the production of composite materials that may comprise plant fibers, including bagasse, as taught by Schloman, Jr., that may be derived from physical processing, admixed with thermosetting or thermoplastic resins. Note the passage from column 1 (line 51) to column 2 (line 40) for the disclosure of the various plant fibers employed to produce the fibers of the composite. The weight percentages of the constituents are also disclosed, as recited in claims 14 and 15. In that regard, further note column 1 (7-21). The reference discusses the resins employed with the fibers at column 3 (lines 4-28), including thermoplastic, as recited in claim 8, and thermoset, including the use of urea-formaldehyde, as recited in claims 10 and 11.

The reference to Schloman, Jr. teaches essentially what is recited in the instant claims, except that the patent fails to teach the use of or the particular thermoset resins, as herein claimed. The reference to Chow teaches that it is known to employ these resins with lignocellulosics, that have been processed to a fibrous consistency. The particular source of the plant fiber is not critical to the invention of Chow. The reference to Chow further teaches that with compression, as opposed to spraying (air-layering), a fiberboard product will result, as recited in instant claim 15.

Art Unit: 1711

The reference to Kuester, cited of interest, teaches a process wherein biomass materials, including those derived from guayule plant, *Parthenium argentatum*, may be employed to produce granulated feedstock by a continuous thermochemical indirect liquefaction process. Note column 3 (line 39) to column 4 (line 42) for the plants that may be employed in the patented process. Note the Abstract and the many Examples. The reference fails to suggest or clearly teach the inclusion of these materials with resins, as herein claimed. As such, the patent is not deemed to present a bar to the patentability of the instant claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nathan M. Nutter whose telephone number is 703-308-2443. The examiner can normally be reached on Monday-Friday 9:30 am to 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck can be reached on 703-308-2462. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9310 for regular communications and 703-872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.
